How to change light bulb in kitchenaid french door refrigerator

If the door(s) have been opened for longer than 10 minutes, the interior lights will automatically turn off. To reset the lights close all the doors. The interior lights in your refrigerator are controlled by the door switch. This switch is activated when the door is opened and closed. If the switch is not being engaged properly, it could cause the interior lights to remain off. The door switch location varies by model number, but in most refrigerators, it can be found either near the top or bottom of the door opening. To ensure proper door switch contact check the following: The refrigerator is level and doors are properly aligned. Ensure there are no magnets or electronic devices (Speaker, CoolVox, etc) within 3 inches of the door switch. For specific installation instruction information, for your model, please see the Owner's Manual. If the refrigerator was recently moved or installed and the doors were removed, check to make sure the wiring plug is properly connected. The wiring plug can be found under the top hinge cover. Reminder - Unplug refrigerator or disconnect power before checking. For complete instructions on how to remove the hinge cover and the wiring plug, please see your Installation Instructions. Sabbath Mode is designed for the traveler or for those whose religious observances require turning off the lights. By selecting this feature, the temperature set points remain unchanged, but the control panel lights, interior lights, and control audio turn off. For most efficient operation, it is recommended to exit the Sabbath Mode when it is no longer required. If you unintentionally turn on Sabbath mode, the word "Sabbath" will light up on the display. Entering and exiting Sabbath mode varies by model, so please reference the Owner's Manual for specific instructions for this model. Most new refrigerators are equipped with LED light bulbs which do not need to be replaced. If your refrigerator or freezer compartment has a traditional light bulb check to see if the light bulb is loose in the socket and tighten if needed. If the bulb needs to be replaced, be sure to replace it with an appliance bulb of the same size, shape, and wattage (no greater than 40 watts). Not all appliance bulbs will fit your refrigerator/freezer. [CLICK HERE](#) for additional information on how to change the light bulb. For specific instructions on how to change the light bulb for your model, refer to your Owner's Manual. The refrigerator is one of the most important appliances in your home, running continuously, keeping food cool or frozen all day and all night. As working very dependably, the refrigerator can break down or problems, like not cooling, not defrosting, or freezing food, which might happen from time to time. In the market today, there are many leading refrigerator brands, including, Frigidaire, GE Whirlpool, Kenmore, KitchenAid, Maytag, and more. Samsung is also one of the high-quality and popular refrigerators in the United States and worldwide. With the "Samsung Refrigerator Troubleshoot Guide" provided here, you can learn about the most common problems, and use this guide to figure out what's wrong. Then you can find the right replacement part, learn how to install it, and fix your refrigerator yourself. This will be saving your money and time. **Common Problems for Samsung Refrigerator** Here is a list of fourteen common problems for Samsung refrigerator and other top brands, like Whirlpool, Frigidaire, GE, or Maytag. Refrigerator not cooling Refrigerator water dispenser not working Refrigerator ice maker not working Refrigerator ice dispenser not working Refrigerator not defrosting Refrigerator noisy or loud Refrigerator defrost drain clogged Refrigerator freezer cold, but refrigerator warm Refrigerator leaking water Refrigerator freezing food Refrigerator ice and water dispenser not working Refrigerator ice maker overflowing Refrigerator light not working Refrigerator runs constantly Samsung Refrigerator Troubleshooting Guide Below we have listed the most common problems for Samsung refrigerator. Check or test each of the possible causes. You will find some part is defective or is not working properly. It could be the main control board, the water inlet valve, the dispenser control board, the fan blade, or other replacement parts. After knowing the defective part, you can find the right part for your refrigerator model, watch DIY repairing videos, and fit it yourself. Here are the common problems and list of parts that might be defective or is not working. **Safety Note:** Disconnect the refrigerator from the power before fixing or replacing any part. 1. Samsung Refrigerator Not Cooling Condenser coils are dirty. The condenser fan motor is not working properly. The evaporator fan motor is not working. The start relay might be defective. The temperature control thermostat is not working properly. The start capacity might have failed. The temperature control board is defective. The thermostat might be faulty. The compressor is not working. The main control board is defective. 2. Samsung Refrigerator Water Dispenser Not Working The water supply tube is frozen. The water inlet valve might be defective. Low water pressure from house supply. The dispenser control board is faulty. The dispenser switch is defective. The door switch might be faulty. The water filter is clogged. 3. Samsung Refrigerator Ice Maker Not Making Ice Freezer temperature is above 10 degrees F, 10 degrees Fahrenheit (approx. -12 degrees Celsius) The water inlet valve might be faulty. Ice maker assembly is defective. The icemaker module is defective. Low water pressure from house supply. The door switch might have failed. The ice level control board fails. Icemaker mold thermostat might be defective. The ice maker switch is defective. The water filter is clogged. 4. Samsung Refrigerator Ice Dispenser Not Working The dispenser control board is faulty. The dispenser switch might be defective. Auger motor is burned out or defective. The dispenser actuator is broken. The dispenser door motor is not working. Dispenser solenoid is defective. Ice bucket auger is broken. The ice crusher blade is bent or broken. 5. Samsung Refrigerator Not Defrosting Defrost control board is defective. Defrost timer might be defective. Defrost heater assembly is defective. The defrost sensor is faulty. Defrost thermostat is defective. The main control board might be at fault. 6. Samsung Refrigerator is Noisy or Loud The fan blade is faulty. The evaporator fan motor is noisy. Condenser fan motor might be defective. The compressor might be damaged. The water inlet valve is not working. 7. Samsung Refrigerator Defrost Drain Clogged The defrost drain is clogged or frozen. Drain heater might be defective or is not in the proper position. Drain strap is not in the place. 8. Samsung Refrigerator Freezer is Cold, But Refrigerator is Warm Evaporator coils are frosted over. The evaporator fan motor is not working. The damper control assembly is not open properly. Thermostat might be defective. The temperature control board is faulty. The defrost control board fails. Defrost thermostat is defective. Defrost timer is not working. The main control board might be defective. 9. Samsung Refrigerator Leaking Water The defrost drain might be frozen or clogged. The water filter head is cracked. The water filter head seal may be torn or missing. Water filter housing might be cracked. The water inlet valve is cracked or has a loose-fitting. The water tank assembly is leaked.
